

Cedar Shingles

Sound Cedar can not be beat in quality and price. We source direct from manufacturers in the local area to find the best shingles for your project. Don't accept sub-standard competition, choose genuine Western Red Cedar Shingles with the Sound Cedar quality project service.

Shakes Versus Shingles

Commonly the term 'Shake' and 'Shingle' are used interchangeably, or the term 'Shingle' seems to mean either one but this is not actually the case. The difference between a shake and a shingle has to do with how they are made.

A Shake is typically split on one or both sides and are commonly still made by hand, although most are made using power equipment.

A Shingle is sawn on both sides and is typically thinner at the butt than a Shake.
