

Cement Siding vs Cedar Siding

The main difference between Cement siding and Cedar siding is watershed versus waterproof. Cement siding will watershed, which means that it needs to be channeled and directed. Without proper flashing and caulking, water will seep in, swell, freeze and cause damage. Real Western Red Cedar is more waterproof. Water can absorb into the wood, but it will not be damaged from freezing or swelling. The natural choice wins with less installation labor and less risk of damage.

How to paint your cement siding to look like cedar?
