

Clear Veneer Siding

Veneered millwork products like no other for the consumer looking for quality and value.

Rainier Plank Advantages

The big advantage of the Rainier Plank line lies in the price vs. quality. Typically our products are about ½ the price of solid wood while providing a much higher grade. The process of veneering for superior grade appearances has been widely accepted for years in the cabinet, window and door, and plywood markets. This is usually not noticed by the end user. Applying this process to millwork for trim and paneling projects allows us to be greener by extending our natural resources of high grade timber.

Cedar Veneer Siding

The contrasting shades of dark brown to bright tan provide an exceptional appearance desired by cultures throughout the world. Architects and designers incorporate the many different colors of Western Red Cedar in variety of concepts used both inside as well as outside. The resistance of cedar against decay and insects enables this duality of use.
