

IPE

IPE wood decking has an extremely dense and tight grain. The grain of IPE wood can be both wavy and straight. The color of IPE heartwood is a rich brown with red and amber hues. Due to the wood's fine texture and interlocking grain, IPE offers superior slip resistance.

Our IPE

Provide extreme insect resistance
Stays cool because it doesn't absorb heat
Repels wood rot & decay
Holds up under extreme traffic & heavy use
Resists mold & fungus
Outlasts composite materials
Resists scratches & splinters
Has increased slip resistance from interlocking grain

Ipe Decking

Ipe is a wood of extremes: extremely dense and durable, as well as extremely difficult to work. Its incredible hardness and strength make it well suited for decking applications.
