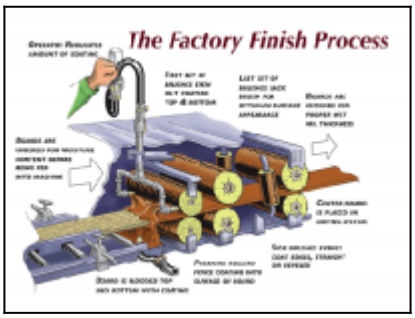
Prestaining Your Deck

Sound Cedar offers a pre-staining service for your decking material. It is applied at a professional pre-staining facility and ensures an even coat on all sides. Not only does it look like a professional finish, it saves you money on your project by greatly reducing your labor costs to stain after the project is complete.

The Process


Each piece has the desired coating flooded on and then brushed and back brushed through a series of hydraulically operated rollers. The pieces are then racked in a drying room until cured. Finally they are re-bundled and wrapped for delivery to your job site ready for installation.
